DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-3 drawn to conducting secure transactions including authentication, classified in class 705 subclass 67.

II. Claims 4-6, drawn to a specialized check printer, classified in class 705 subclass 1.

II. Claims 7-9, drawn to transaction verification, classified in class 705 subclass 75.

Inventions I, II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because invention I does not require a check printer or a hash value used to verify a check for online transactions. The subcombination has separate utility such as printing cjecks or verifying online transactions.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
